## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 2\_Q5

Attempt : 1

Total Mark : 10

Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Ted, the computer science enthusiast, has accepted the challenge of writing a program that checks if the number of digits in an integer matches the sum of its digits.

Guide Ted in designing and writing the code to solve this problem using a 'do-while' loop.

##### *Input Format*

The input consists of an integer N, representing the number to be checked.

##### *Output Format*

If the sum is equal to the number of digits, print "The number of digits in N matches the sum of its digits."

Else, print "The number of digits in N does not match the sum of its digits."

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 20

Output: The number of digits in 20 matches the sum of its digits.

### ***Answer***

```
import java.io.*;
import java.util.*;
class Main{
    public static void main(String args[]){
        Scanner sc=new Scanner(System.in);
        int N=sc.nextInt();
        int count=0,sum=0,N1=N;
        do{
            count++;
            sum+=N1%10;
            N1/=10;
        }while(N1!=0);
        if(count==sum){
            System.out.printf("The number of digits in %d matches the sum of its
digits.",N);
        }else{
            System.out.printf("The number of digits in %d does not match the sum of
its digits.",N);
        }
    }
}
```

**Status : Correct**

**Marks : 10/10**
